PL4

Office Action Summary	Application No.	Applicant(s)	
	09/924,983	SINGH ET AL.	
	Examiner	Art Unit	
	Bryce P Bonzo	2114	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 08 August 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-18 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-18 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 8/3/01 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

NON-FINAL OFFICIAL ACTION

Status of the Claims

Claims 1-4, 6-9, 14-18 are rejected under 35 USC §102.

Claim 5 is rejected under 35 USC §103.

Claims 11-13 are rejected under 35 USC §112.

Claim 10 is objected to while containing allowable matter.

Rejections under 35 USC §112, second paragraph

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 11-13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 11-13 recite: wherein the persistent program periodically initiates the test script program. Claims has the control program initiate the test script program. This is a contradiction which must be cleared up prior to further examination. From the specification, Applicant is advised to change the use of the words initiates to activates in claim 11, so that claims 1 and 11 remain consistent.

Rejections under 35 USC §102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 6-9, 14-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Edwards (United States Patent No. 5,901,315).

As per claim 1, Edwards discloses:

A method for use in providing improved fault tolerance in a computing system comprising at least one computing machine, the method comprising the steps of:

executing a control program in conjunction with a fault tolerance software system running on the at least one computing machine (column 4, lines 2-4: debug engine; column 3, lines 62-67 GUI); and

initiating via the control program a test script program which sends one or more requests to a monitored program (column 4, lines 4-14: probe), wherein the test script program processes corresponding responses to the one or more requests (column 4, lines 4-14), and generates at least one return value utilizable by the control program to indicate a failure condition in the monitored program (column 4, lines 4-14: report to DE).

As per claim 2, Edwards discloses:

The method of claim 1 wherein the computing system is configured in accordance with a client-server architecture and the at least one computing machine comprises a server of the computing system (column 3, lines 44-52).

As per claim 3, Edwards discloses:

The method of claim 1 wherein the control program comprises a control thread of a failure detection process associated with a failure detection component of the fault tolerance software system (inherent as the DE is a Java element).

As per claim 4, Edwards discloses:

The method of claim 1 wherein the control program comprises a thread of a failure detection process and the test script program comprises a process separate from the failure detection process (column 8, lines 42-51; column 7, lines 58-65: shows distinct process and interface structure of separate processes).

As per claim 6, Edwards discloses:

The method of claim 1 wherein the test script program is implemented in an object-oriented programming language such that one or more components of the test script program comprise a base class from which one or more other components of the test script program are generatable for use with the monitored program (column 6, line 61 through column 7, line 16).

As per claim 7, Edwards discloses:

The method of claim 6 wherein the object-oriented programming language comprises the Java programming language (title).

As per claim 8, Edwards discloses:

The method of claim 6 wherein the one or more components comprising the base class comprise one or more of an initialization component, an obtain requests component, and a request interruption component (column 4, lines 47-57; column 5, lines 1-8 are base classes).

As per claim 9, Edwards discloses:

The method of claim 8 wherein the one or more other components generatable from the base class comprise a request issuance component and a response verification component, both particular to the monitored program (column 9, lines 9-30).

As per claim 14, Edwards discloses:

The method of claim 1 wherein the test script program comprises an interpreted script (column 9, lines 24-39).

As per claim 15, Edwards discloses:

The method of claim 1 wherein the test script program comprises a native executable (column 9, lines 24-39).

As per claim 16, Edwards discloses:

The method of claim 1 wherein the test script program comprises byte code (column 9, lines 24-39).

As per claim 17, Edwards discloses all the elements of the apparatus of claim 17 in the method of claim 1 and is rejected on the same grounds.

As per claim 18, Edwards discloses all the elements of the storage medium of claim 18 in the method claim 1 and is rejected accordingly.

Rejections under 35 USC §103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Edwards.

As per claim 5, Edwards does not explicitly disclose:

wherein the control program comprises a thread of a failure detection process and the test script program comprises a thread of the same failure detection process.

The use of a single process in programming is a well known practice in the programming arts allowing for highly dedicated programming construction. Single processes are often the result of natural programming in programs which only have a single use. Thus it would have been obvious to one of ordinary skill in the art at the time of invention to implement the control program and test script program as a single process thus allowing an easier programming of the debugging software.

Objections to the Claims

Claim 10 is objected to while containing allowable matter.

Claim 10 recites over the prior art:

wherein for each of the requests specified in the obtain requests component, that component creates corresponding ones of the request issuance component and the request interruption component, and wherein the request interruption component terminates the corresponding request if a response from the monitored program is not received within a designated period of time.

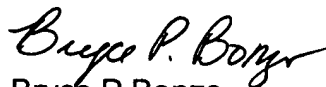

Applicant is reminded the claim are indicated allowable as a whole and any modification to the scope of the claim may result in a new final rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bryce P Bonzo whose telephone number is (703) 305-4834. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Beausoliel can be reached on (703) 305-9713. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
